
NONCREDIT AVIATION

NONCREDIT AVIATION

The goal of the Noncredit Aviation program is to offer low-cost and experiential based training for individuals who represent a wide range of industry interests. Given that drone technology is cost prohibitive, and FAA requires certification for commercial use, this program would provide an equitable alternative to other fee-based instruction. The objective of the program is to prepare students to successfully pass the FAA certification exam and train students in real life scenarios that reflect industry trends and applications that our existing academic programs represent (marketing, entertainment, photography, public safety, agricultural, and industrial inspections).

Noncredit Programs of Study

Certificates of Completion:

- Drone Photography, Mapping, and Piloting
