PHOTOGRAPHY

The Las Positas College Photography program offers a broad array of course opportunities crossing a full spectrum of the imaging field. Students become familiar with traditional film-based and digital (electronic) imaging technologies for making artistically rendered, captivating photographic images (both black & white and color) of visual communications and media. Students do hands-on work in the College's well-equipped studio, darkroom and computer laboratory. They master digital imaging in preparation for print and web distribution, create short programs in videography, and work with artificial lighting for portrait and commercial applications. Most students take a history of photography class and a course concentrating on doing documentary photography.
